

CARLOS MANUEL GUARDADO DELGADO

Full Stack Developer | Web Systems

La Libertad, El Salvador | +503 7544-8461 | cmgd292005@gmail.com | [GitHub](#) | [Linkedin](#) | [Portfolio](#)

PROFESSIONAL PROFILE

Software Developer with a solid technical foundation in the design, development, and deployment of scalable web applications. Demonstrated experience implementing Full-Stack architectures (Angular, React, Node.js, Express), managing relational and non-relational databases, and version control. Highly analytical profile focused on optimizing operational efficiency, ensuring backend robustness, and building high-performance, user-centric interfaces.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Automotive Retail Sector

May 2026 – September 2026

- Led the development of a production-ready Point of Sale (POS) and inventory management platform for total operational control.
- Designed and implemented a modern frontend architecture using Angular with robust RESTful API integration via Node.js and Express.
- Managed data persistence in MongoDB Atlas and orchestrated deployments to production environments using Vercel and Render.

Recauda | Offline-First Mobile Application (React Native, Node.js & PostgreSQL Jun 2026 - Present

- Engineered a mobile application to digitalize field donation tracking using React Native and Expo, backed by a Node.js RESTful API and a cloud-based PostgreSQL database (Neon).
- Architected an offline-first session management system utilizing AsyncStorage, enabling field volunteers to seamlessly operate and record data in zero-connectivity environments.
- Implemented Over-The-Air (OTA) deployment pipelines via expo-updates, allowing instant interface and logic updates without requiring full APK reinstalls.

SELECTED PROJECTS

Sismos SV Platform | Full-Stack Web Application (React, Node.js & Python)

- Developed a full-stack web platform for seismic risk monitoring utilizing React, Node.js, and MongoDB.
- Integrated an external Machine Learning service built in Python to process and analyze seismic data trends.
- Configured cloud architecture and managed production deployments on Vercel and Render.

PC-SalesBot Pro | Telegram AI Assistant (Python, Google Gemini & MongoDB)

- Developed an intelligent Telegram bot leveraging Python, the Google Gemini API, and MongoDB Atlas.
- Implemented automated hardware recommendation workflows, catalog validation, and real-time chat history persistence.
- Deployed and scaled the microservice application on Render with health checks and cloud environment configurations.

MERN Inventory System | Full-Stack Platform (React & Node.js)

- Designed and built a web application focused on library resource management.
- Integrated a React.js frontend with a Node.js RESTful API, ensuring secure authentication and data synchronization.

SKILLS

- **Frontend:** Angular, React.js, HTML5, CSS, JavaScript, TypeScript, React Native, Expo
- **Backend:** Node.js, Express, Laravel, C#
- **Databases:** MongoDB Atlas, MySQL, MariaDB, SQLite, PostgreSQL
- **DevOps, Tools & Cloud:** Git, GitHub, Docker, Vercel, Render, VirtualBox.

EDUCATION

- B.S. in Systems and Computing Engineering (4th year)
Universidad Dr. Andrés Bello (UNAB) | 2023 – Present
- English Coursework - Academia Europea
